- Naming of variables.
- the Reference of the hier. list must be the table-number.

Using DBZ with your own code

Get the currently selected table, either the table-number or a pointer to the table, e.g. for printing purposes:

```
DBZ_Navigator ("Current_GetTableL";->$currTable_L)  
DBZ_Navigator ("Current_GetTablePointer";->$P_currTable)
```

Changing text-exports from tab-delimited to CSV:

```
FldDelimit:=Char(";")
```

Exporting yourself, like having menu-items:

```
DBZ_Navigator ("Export_Text")  
DBZ_Navigator ("Export_HTML")  
DBZ_Navigator ("Export_Excel")  
DBZ_Navigator ("Export_4DView")
```

The listbox will accept text-files dropped from the Finder.
RecDelimit and FldDelimit are used.

Sichern

First line of dropped text
V11 if the first cell equals the name of the first column-field, the first line is dropped
V12 if the first cell equals the name of the first column-header, the first line is dropped

First column is the index-column. If fieldcontent of first column matches the first field of the dropped text-table, the record gets updated, otherwise a new record is created.

Extra-Window

The screenshot shows the 'Einstellungen' (Settings) window for the 'BANKEN' table. The 'Eingabe-Formular' (Entry Form) field is highlighted with an orange box. An orange arrow points from a text box on the right to this field. The table below shows columns for BANK_BLZ, BANK_Name, BANK_Ort, and BANK_PLZ2 with various bank entries.

| BANK_BLZ | BANK_Name | BANK_Ort | BANK_PLZ2 |
